PMT Classifier System JS75

- ¹⁾ The capacity depends on the amount of fines in the feed material of the Classifier and the natural mineral characteristics which is depending on the ore body. The shown values give therefore only average results.
- ²⁾ Data are based on the operation with a Roots Blower with 0,4 bar pressure and 75 m³/min air volume.

For the dimensioning of your specific plant we would like to invite you into our pilot plant in Kammern, where we have a test plant, which is available for customer trials.
